\*Gross payload capacity equals GVWR minus chassis weight. Installation of specialized equipment or bodies may require frame reinforcement. \*\*Wheelbase selection should be based on specific weight distribution. \*\*\*Typical body lengths assume water level load (no specific consideration for driver, passengers, or fuel) to maximize GVWR. Addition of ancillary equipment such as lift gates and refrigeration units not considered in calculations. <sup>†</sup> Chassis Weight will be 25 lbs. heavier at the "Rear", on average when Air-Ride suspension is selected. <sup>†</sup> Air-Ride Suspension not available on E W/B.
